21 世纪不动产

21世纪中国不动产利用 Azure 与 Xamarin 以"云+端"方式打造高效的房产 O2O 平台

"通过与概软合作,让我们体验到使用 Xamarin 这种跨平台原生应用程序构建解决方案的优势。我们现有开发人员可以在熟悉的 Visual Studio 环境中利用已有的 C# 经验快速的实现跨平台原生应用的构建。调试、发布,大幅部化新证用的开发周期,同时与 Azure 公有云整台,让我们可以利用更多的云服务为应用提供新的体验,全面实现企业 O2O 平台构建和数字化转型的战略目标。"

——孔明 研发总监 21 世纪中国不动产

行业:建筑和房地产

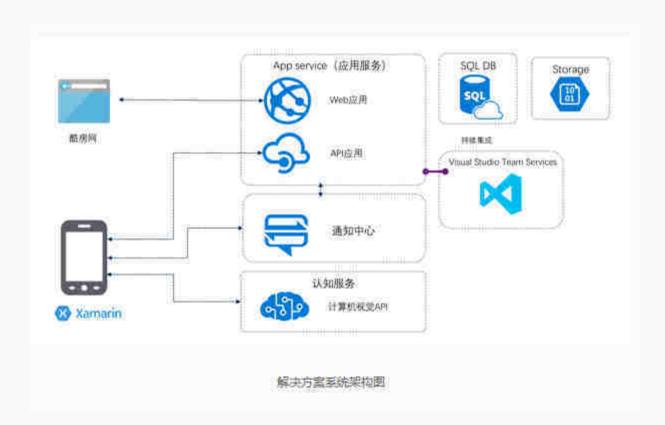

地区:中国 运用产品:

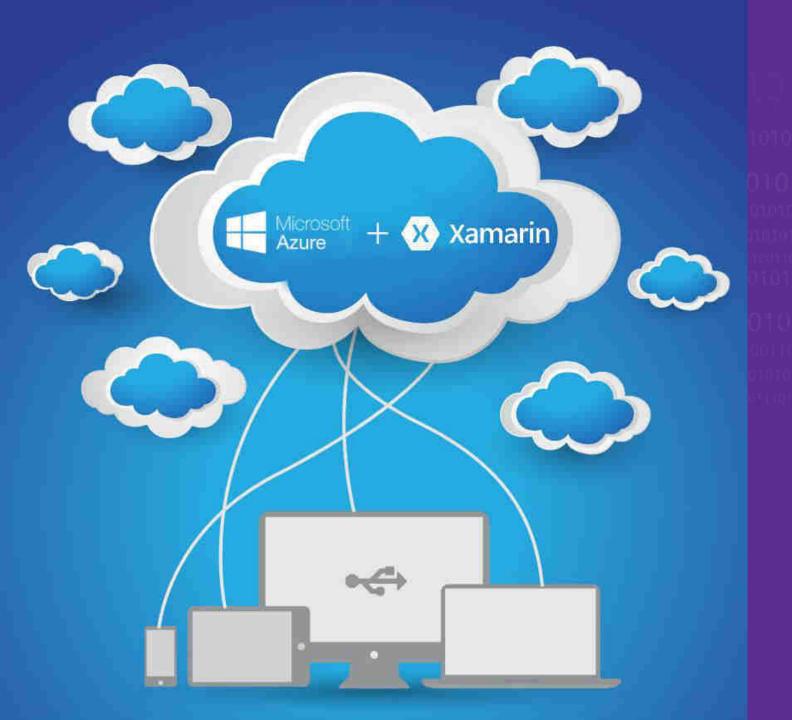

· Development Tools

业务背景

Workshop介绍

2天

09:00-12:00

13:00 – 16:00

Day 1

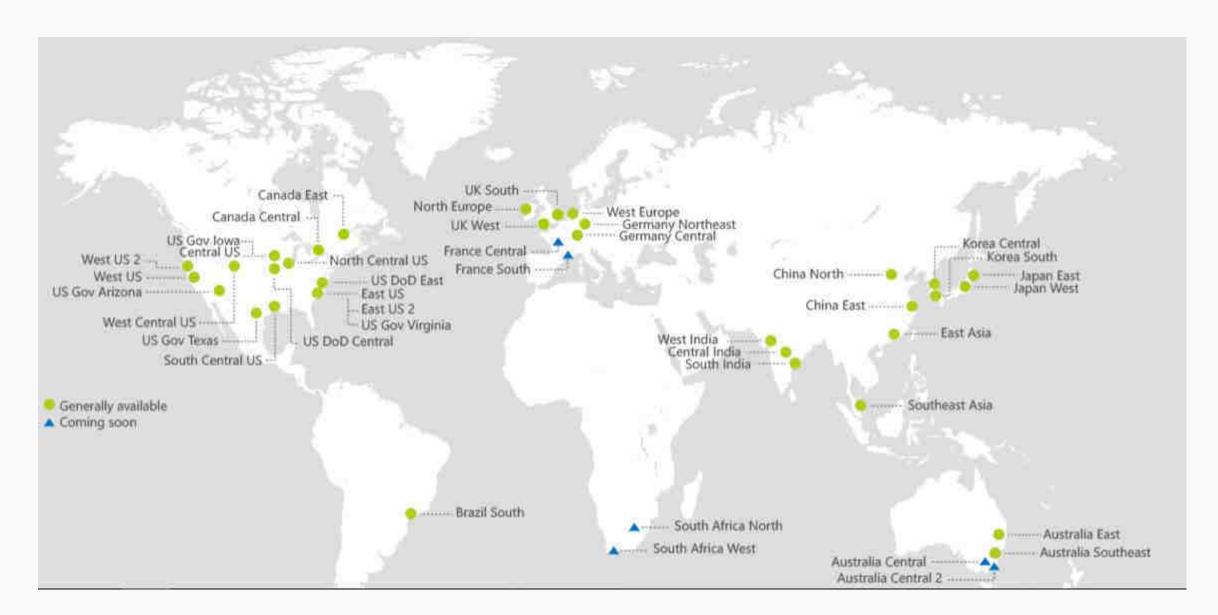

- Azure介绍
- Workshop AX项目介绍
- AX项目服务端开发
- AX项目Azure部署

Day 2

- Xamarin 介绍
- AX项目移动端开发
- AX项目调用Azure服务

Azure介绍

全球42个区域

72个产品

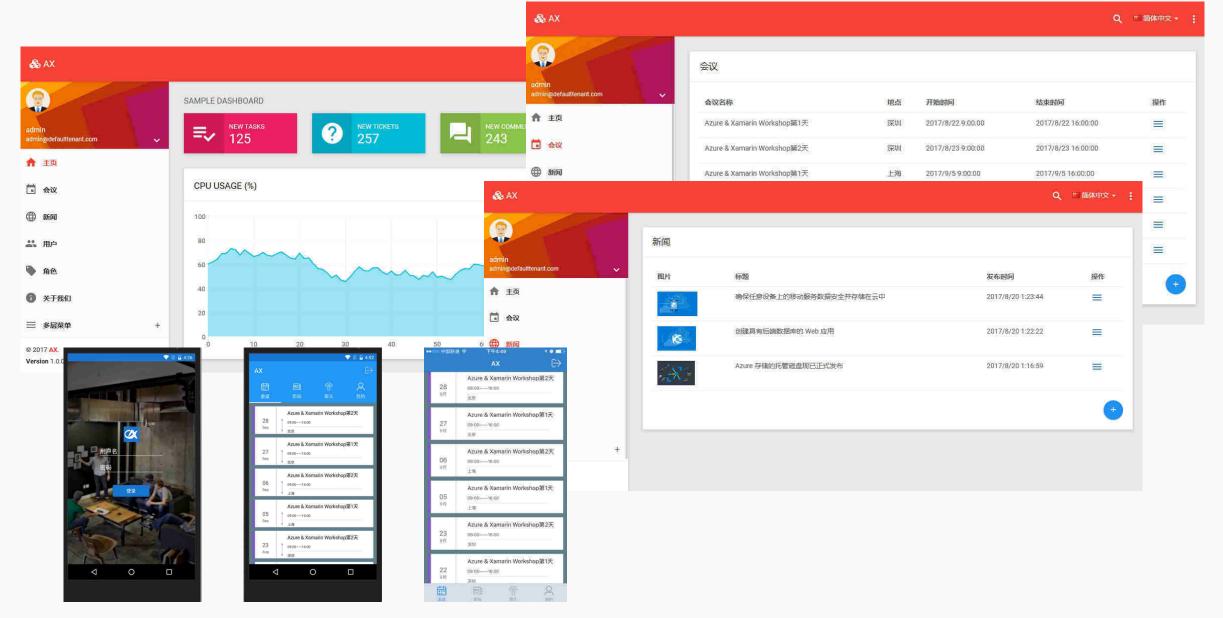

https://azure.microsoft.com/zh-cn/services/

Workshop项目AX介绍

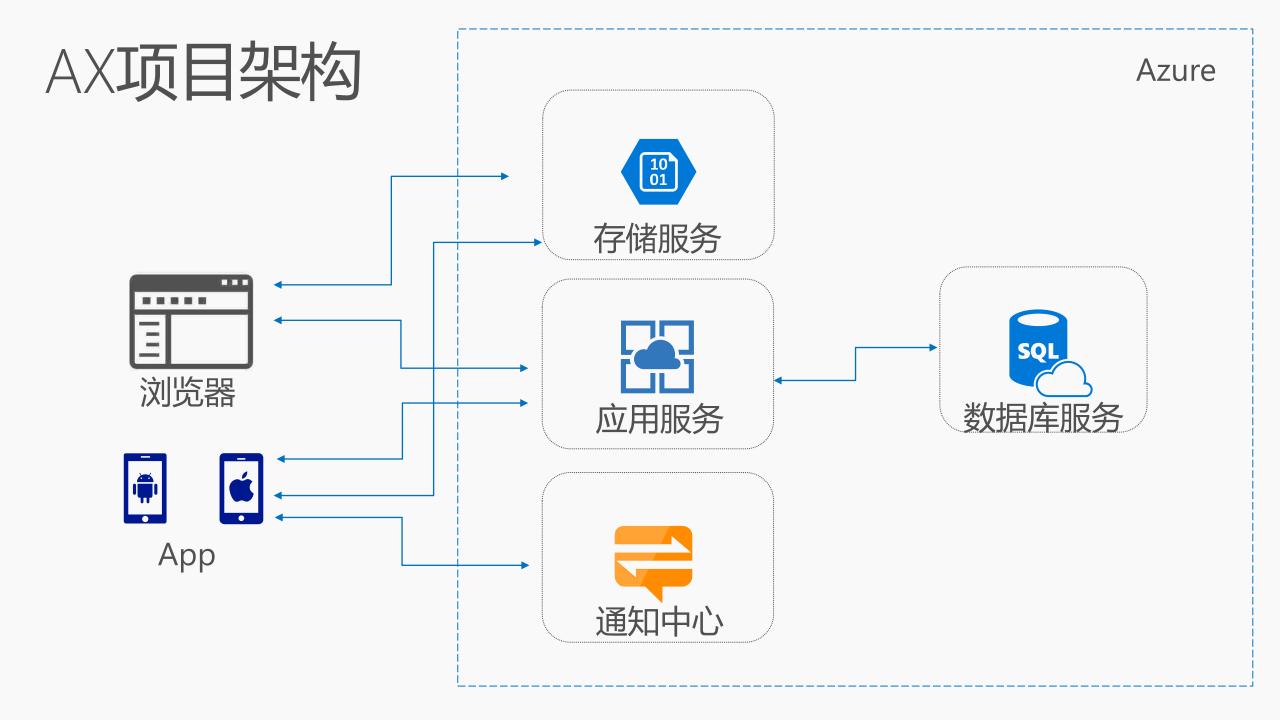

AX 项目介绍

AX 项目开发工具及语言

- Visual Studio 2017
- ASP.NET MVC
- Xamarin
- (#

AX-服务端开发

关于Abp框架

Abp: https://aspnetboilerplate.com/

- 多层结构
- 模块化
- DDD

ASP:NET Boilerplate is a general purpose application framework especially designed for new modern web applications. It uses already familiar tools and implements best practices arround them to provide you a SOLID development experience.

Layered Architecture

Provides a layered architectural model based on Domain Driven Design.

Multi Tenancy

SaaS applications made easyl Integrated multitenancy from database to UI

Well Documented

Compherensive documentation and jump start tutorials:

Modular Design

Designed as modular and extensible. Provides infrastructure to build your own modules too.

Domain Driven Design

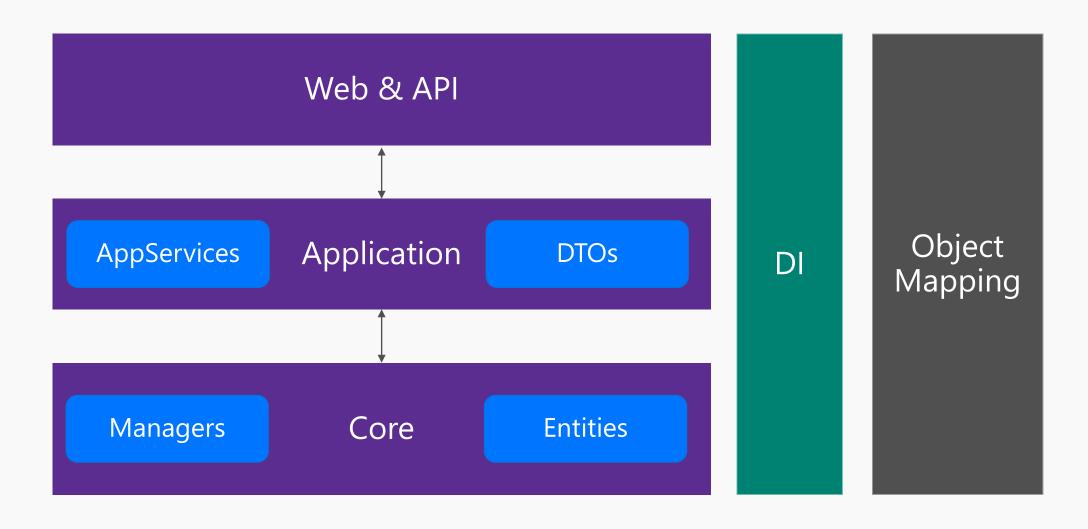

Designed and developed DDD in mind. Provides a SOLID model for your application.

Free & Open Source

Actively developed on Github (MIT license) and open for contributions.

Abp框架多层结构

演练一: 创建AX项目

01:创建Abp项目模板

• 创建Abp项目模板或使用Workshop提供的模板

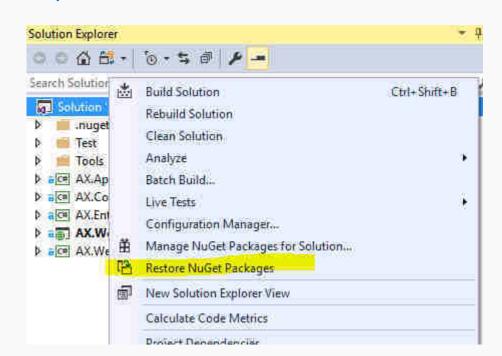

https://projectax.blob.core.chinacloudapi.cn/src/AX 01Start.

zip

https://projectax.blob.core.chinacloudapi.cn/src/AX 02Full.z

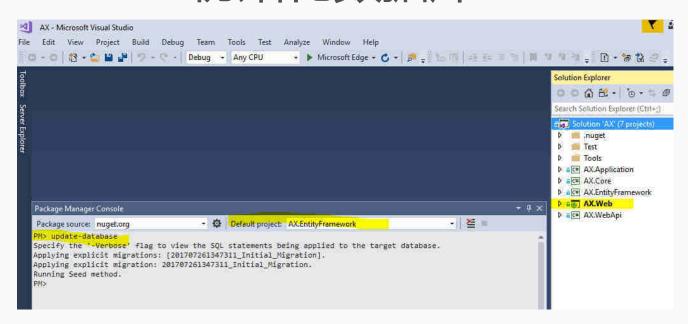

<u>ip</u>

· 恢复nuget 包,编译解决方案

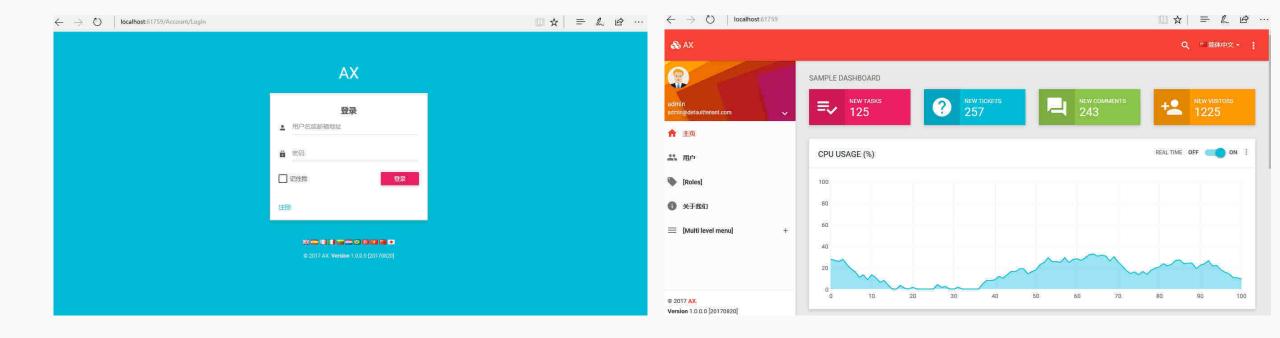

02:初始化数据库

- 1. 创建SQL数据库AX
- 2. 修改Web.Config 配置数据库连接字符串
- 3. 在VS**的**Package Manager Console**窗口中使用** update-database**初始化数据库**

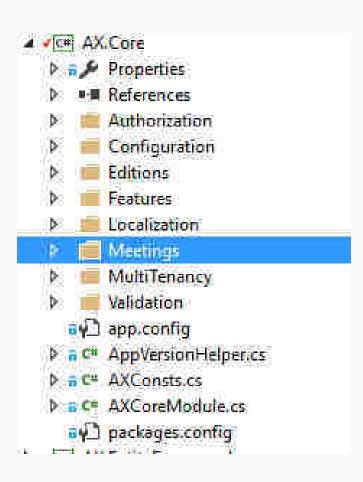

03:运行项目

- · 登录用户名:admin
- 密码: 123qwe

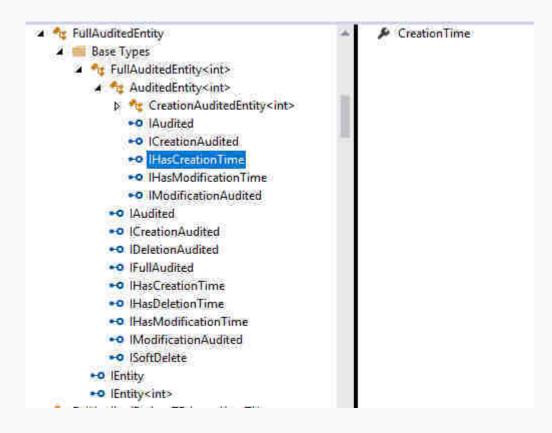

演练二:实现AX.Core

01:在AX.Core项目新建文件夹"Meetings"

02:在"Meetings"目录下新建Meeting.cs

```
public class Meeting:FullAuditedEntity<int>
        public const int MaxSubjectLength = 50;
        public const int MaxLocationLength = 200;
        public const int MaxMoreInfoLength = 500;
        [Required]
        [StringLength(MaxSubjectLength)]
        public virtual string Subject { get; set; }
        [Required]
        [StringLength(MaxLocationLength)]
        public virtual string Location { get; set; }
        [Required]
        public virtual DateTime StartTime { get; set; }
        [Required]
        public virtual DateTime EndTime { get; set; }
        [StringLength(MaxMoreInfoLength)]
        public virtual string MoreInfo { get; set; }
```

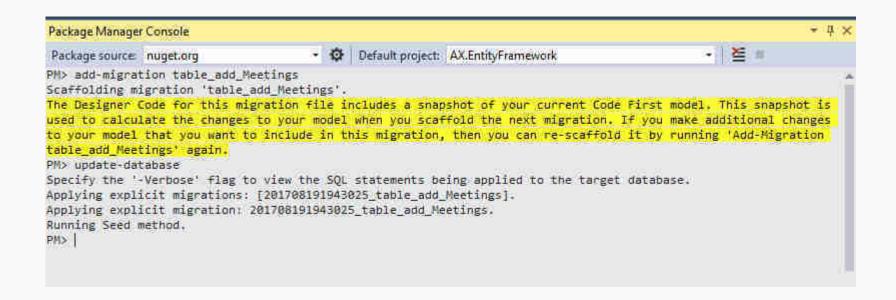

03: 更新AX.EntityFramework

- 1. 在AX.EntityFramework项目中打开 EntityFramework\AXDbContext.cs
- 2. 添加如下代码:

```
public IDbSet<Meetings.Meeting> Meetings { get; set; }
```

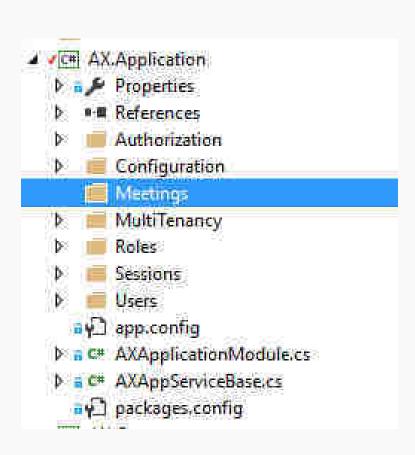

04:更新数据库

- 1. 在VS的Package Manager Console窗口中使用add-migration table_add_Meetings命令
- 2. 然后运行update-database命令

演练三: AX.Application

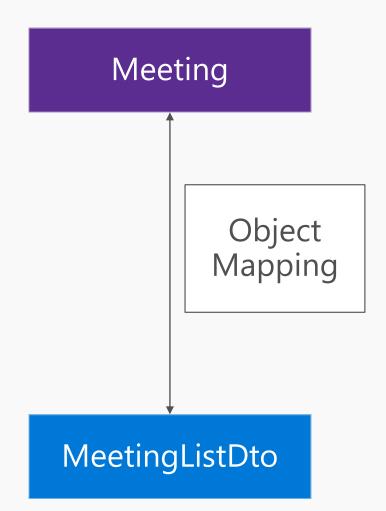

01: 在AX.Application项目中新建文件 夹"Meetings"

02:在"Meetings" 目录下创建DTOs

- 1. 新建"Dto"目录
- 2. 在"Dto"目录下新建MeetingListDto.cs及 MeetingDto.cs

```
[AutoMap(typeof(Meeting))]
   public class MeetingListDto:EntityDto<int>
   {
      public string Subject { get; set; }
      public string Location { get; set; }
      public DateTime StartTime { get; set; }
      public DateTime EndTime { get; set; }
}
```

```
[AutoMap(typeof(Meeting))]
  public class MeetingDto:EntityDto<int>
       [Required]
       [StringLength(50)]
       public string Subject { get; set; }
       [Required]
       [StringLength(200)]
       public string Location { get; set; }
       [Required]
       public DateTime StartTime { get; set; }
       [Required]
       public DateTime EndTime { get; set; }
       [StringLength(500)]
       public string MoreInfo { get; set; }
```

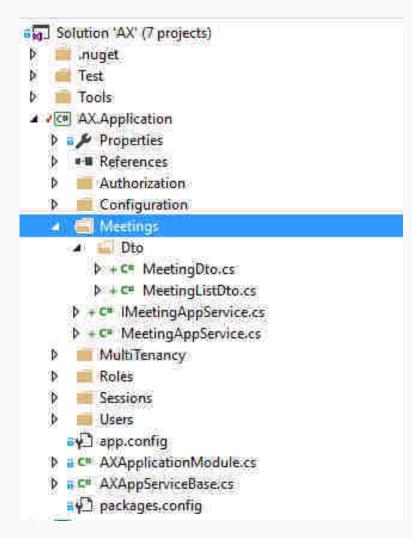

03:定义IMeetingAppService接口

在Meetings目录下,新建IMeetingAppService.cs

04: 定义MeetingAppService

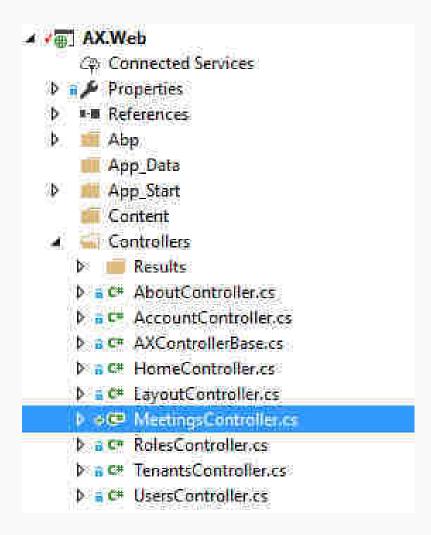

在Meeting目录下,新建MeetingAppService.cs

```
public class MeetingAppService : CrudAppService<Meeting, MeetingDto>, IMeetingAppService
        public MeetingAppService(IRepository<Meeting> repository) : base(repository)
       public PagedResultDto<MeetingListDto> GetAllList(PagedAndSortedResultRequestDto input)
            var list = this.Repository.GetAll().OrderBy(x =>
x.CreationTime).Skip(input.SkipCount).Take(input.MaxResultCount);
            return new PagedResultDto<MeetingListDto>
                Items = Mapper.Map<List<MeetingListDto>>(list),
                TotalCount = this.Repository.Count()
            };
        public Task SendNotification(int id)
            throw new NotImplementedException();
```

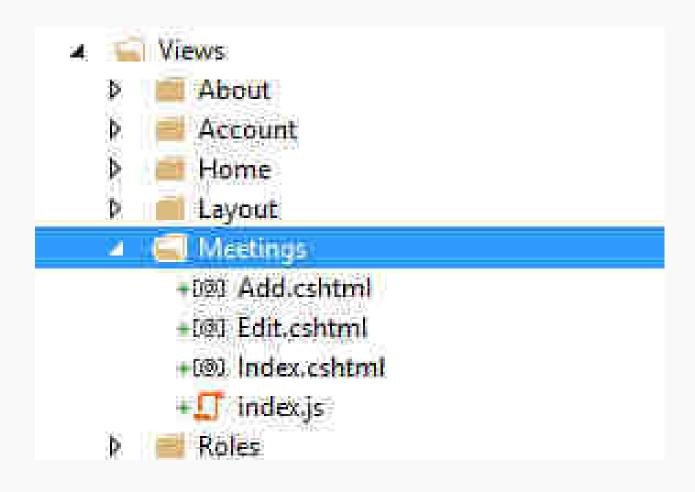

演练四:AX.Web

01:新建MeetingsController.cs

02:新建Meetings Views

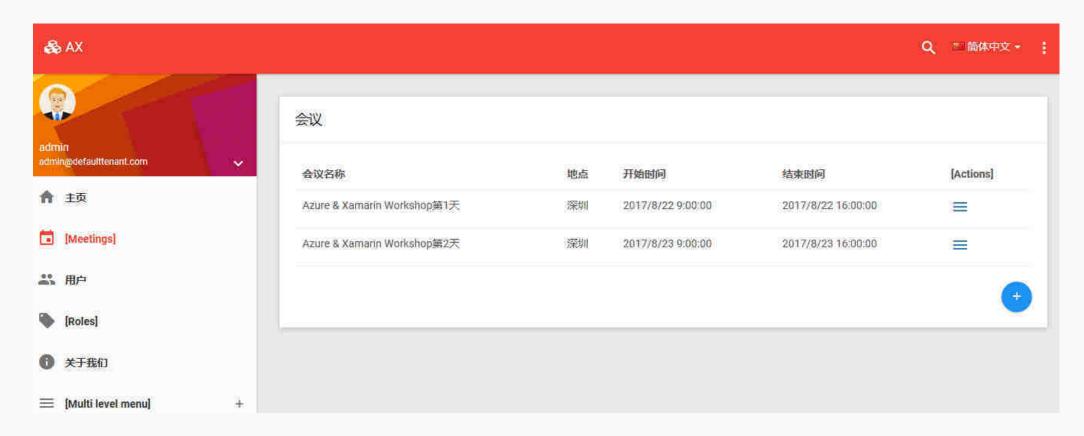

03:添加页面导航

- 1. **打开**AX.Web\App_Start\AXNavigationProvider.cs
- 2. 添加如下代码:

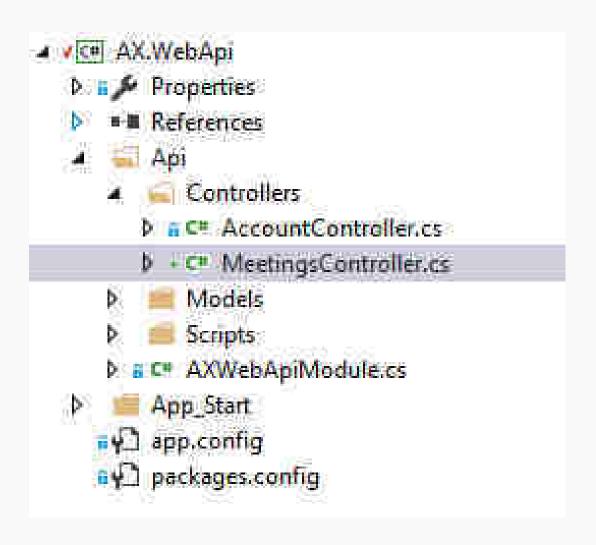

04:运行程序

• 添加会议数据

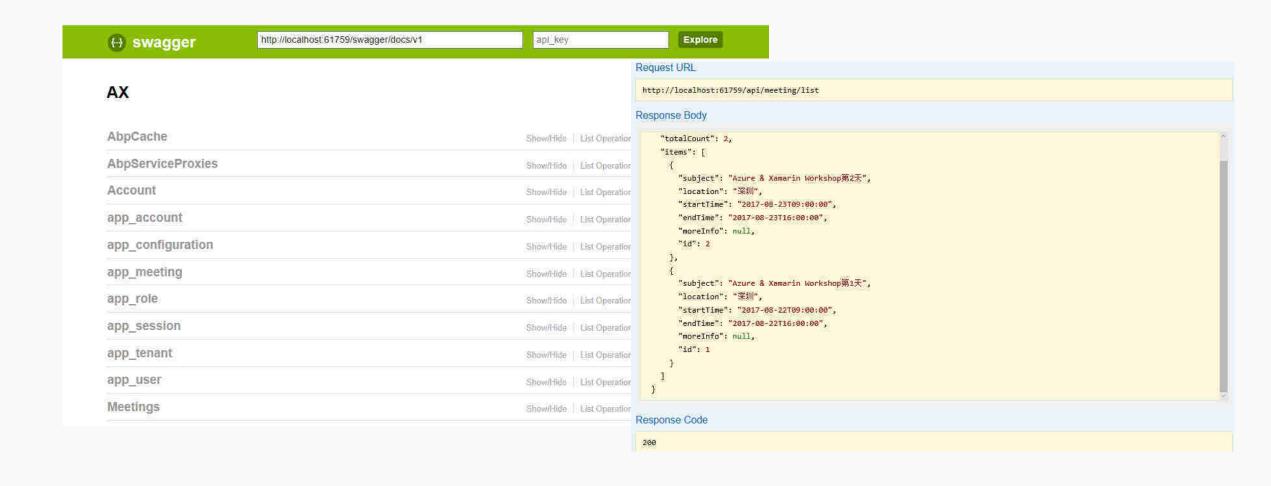

演练五: AX.WebApi

01:在AX.WebApi中添加MeetingsController

02:运行程序,通过swagger测试api

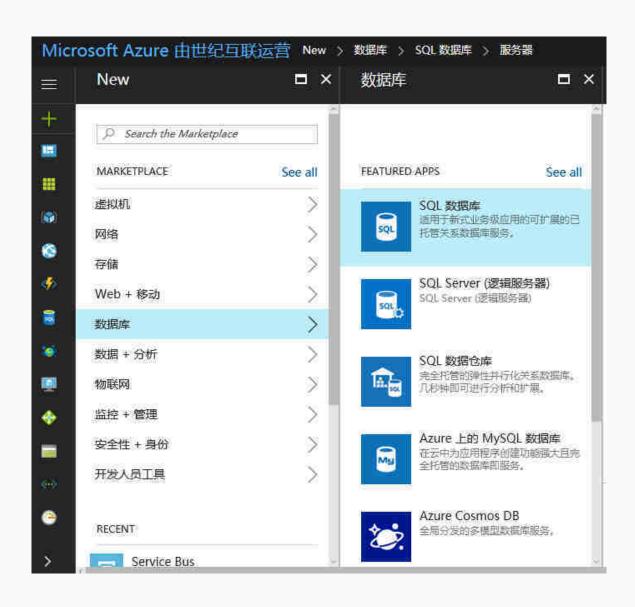

• http://localhost:61759/swagger/ui/index

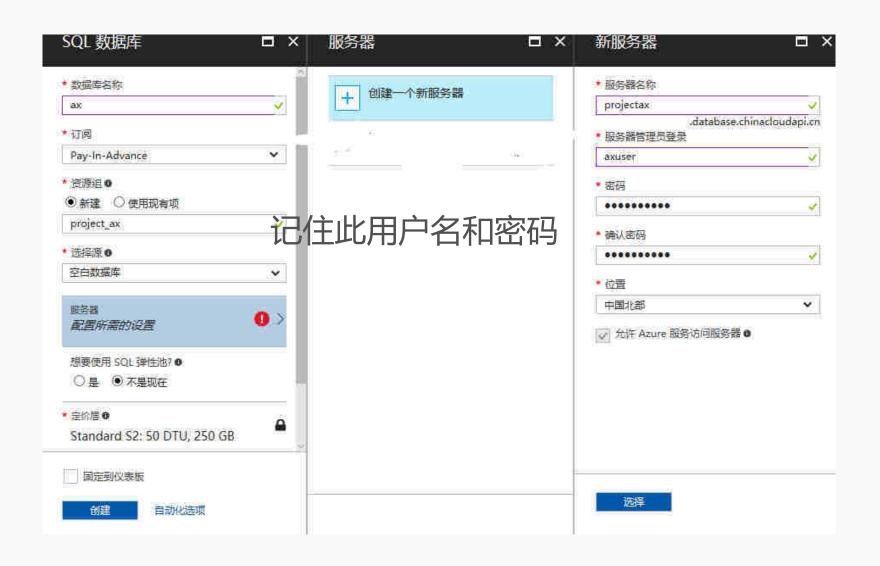

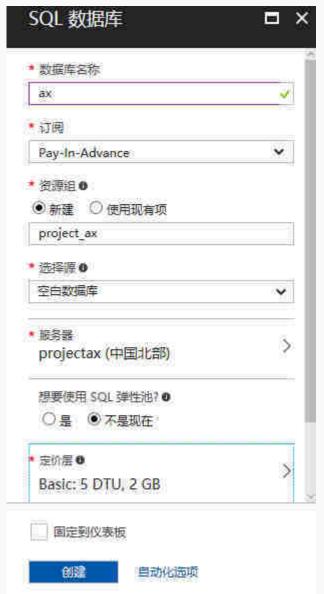

将AX部署到Azure

https://portal.azure.cn

01 创建Azure SQL数据库

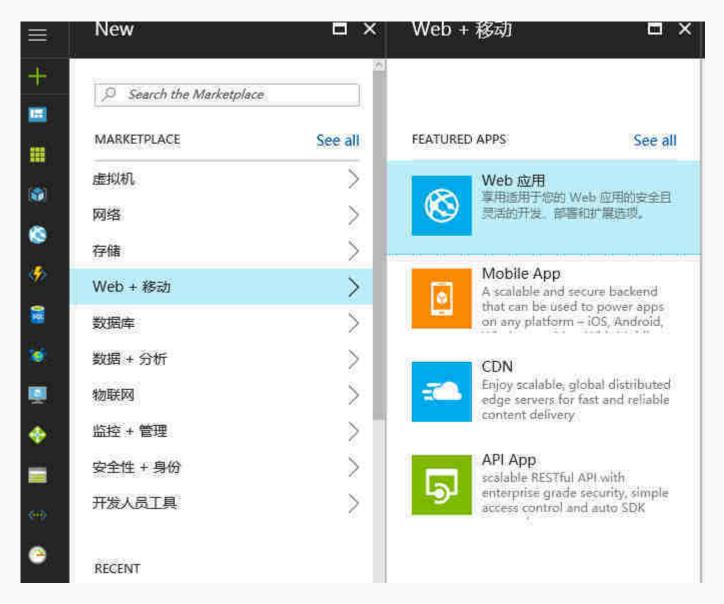

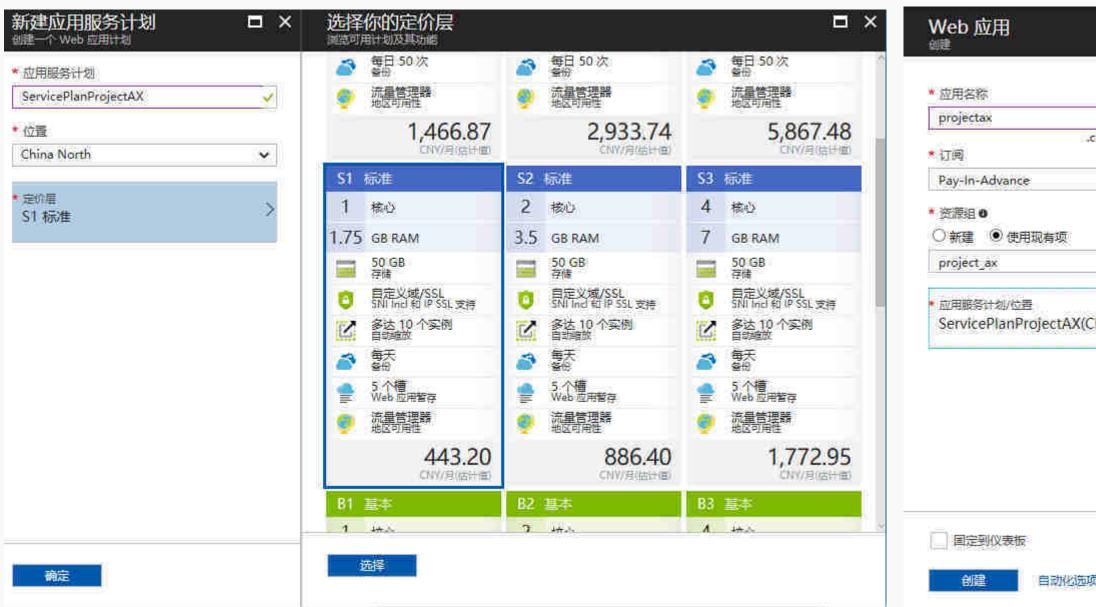

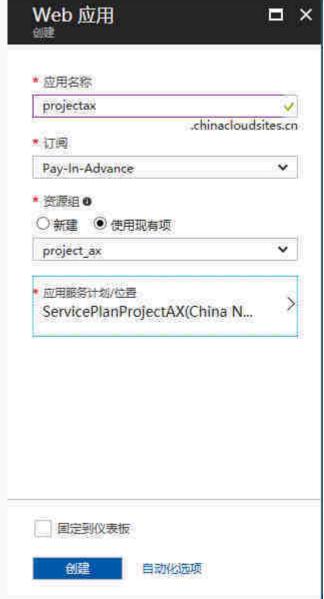

· 获取数据库连接字符串,配置Web.config

02 创建Azure应用服务

03: 创建数据存储服务

· 获取存储服务访问密钥并配置Web.config

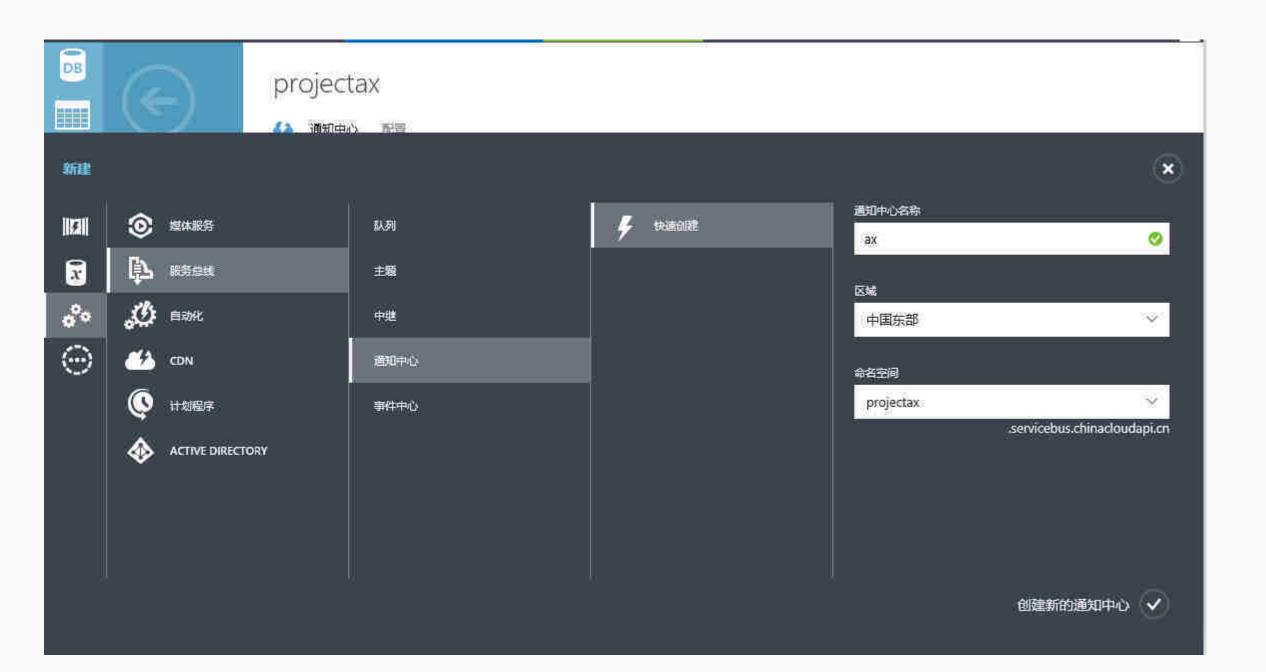

```
<add key="AzureBlobAccessKey" value="" />
<add key="AzureBlobAccount" value="" />
<add key="AzureBlobUrlPostfix" value="core.chinacloudapi.cn/" />
```

04: 创建通知中心服务

https://manage.windowsazure.cn/

• 配置Web.config

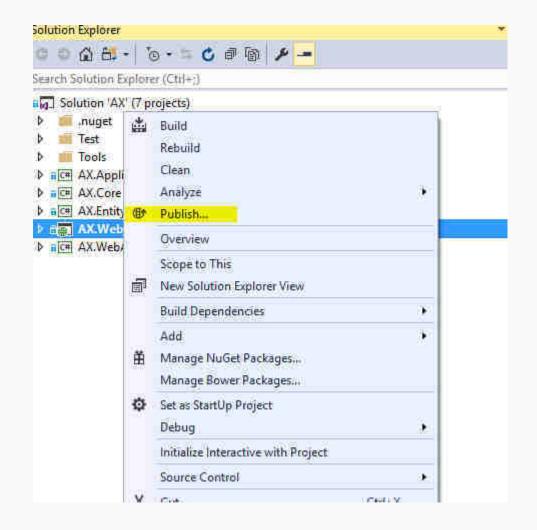

```
<add key="AzureNotificationHubConnectionString" value="" />
<add key="AzureNotificationHubPath" value="" />
```

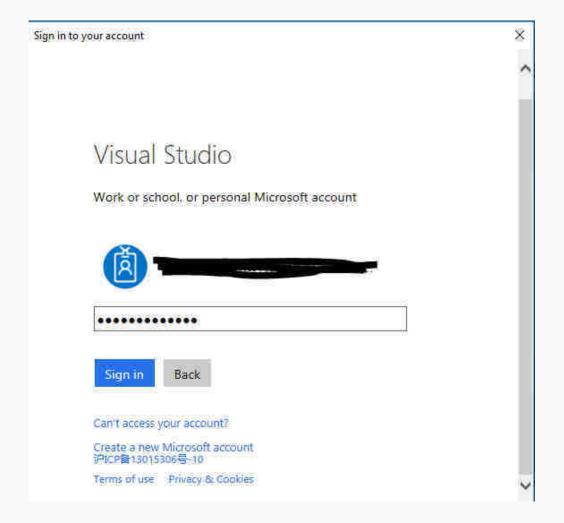

05:部署数据库到SQL Azure

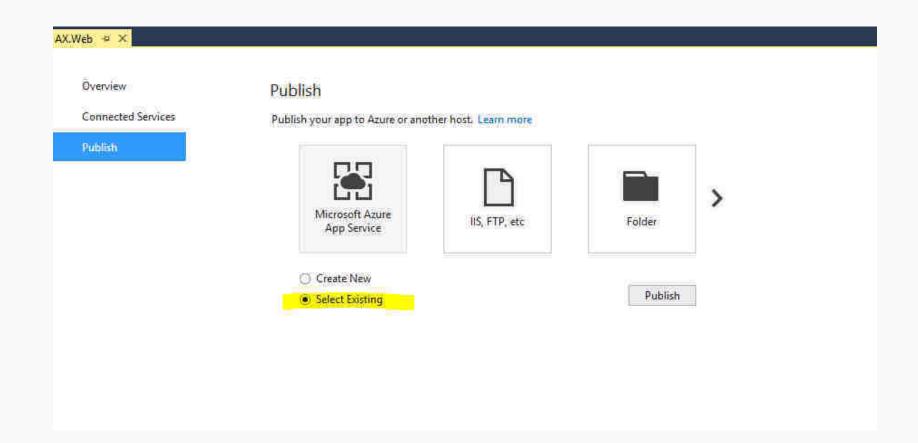

- · 修改SQL Azure 防火墙设置
- 确认Web.config连接字符串
- 运行update-database命令

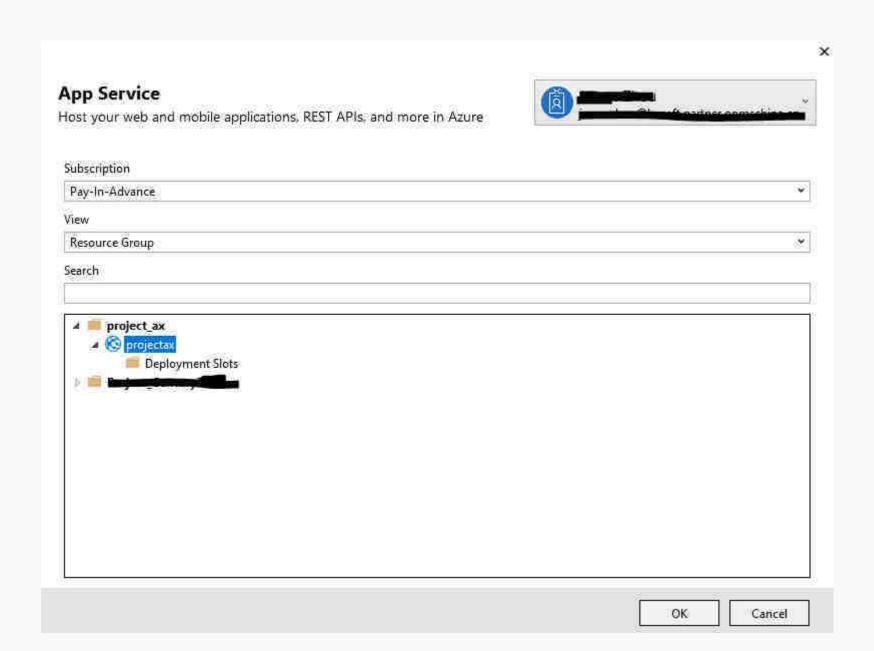

06:使用VS2017登录连接Azure (中国)

• https://docs.azure.cn/zh-cn/articles/others/aog-portal-management-qa-vs2017-login

Day 2

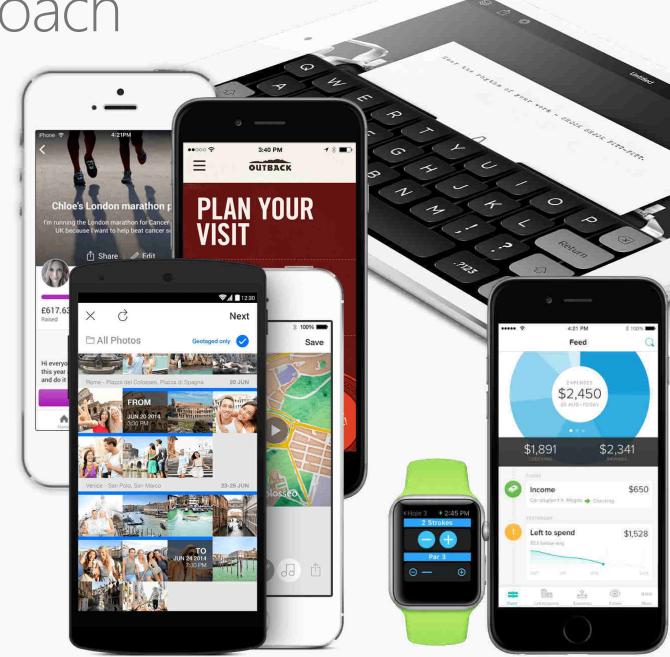

- Xamarin 介绍
- AX项目移动端开发
- AX项目调用Azure服务

Xamarin介绍

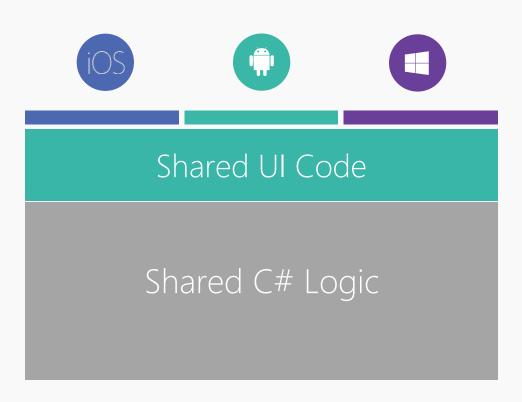

Xamarin Native approach

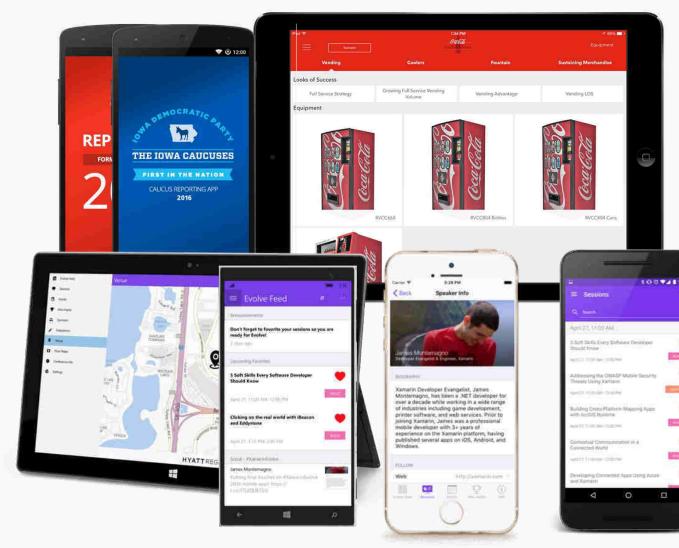

3 Native User Interfaces Shared App Logic

Xamarin.Forms approach

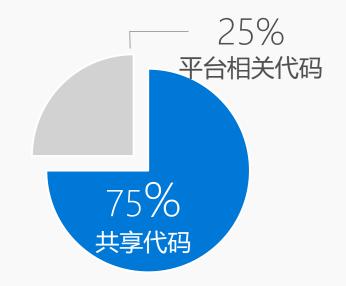

Shared (Native) User Interfaces
Shared App Logic

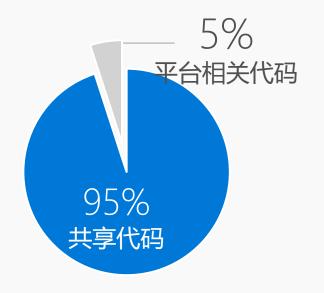

Xamarin Native, Xamarin Forms代码共享

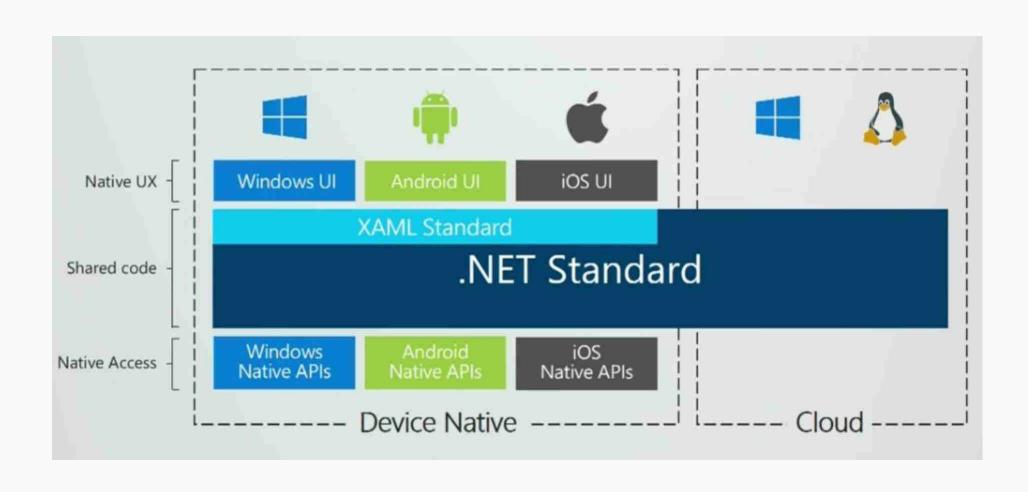

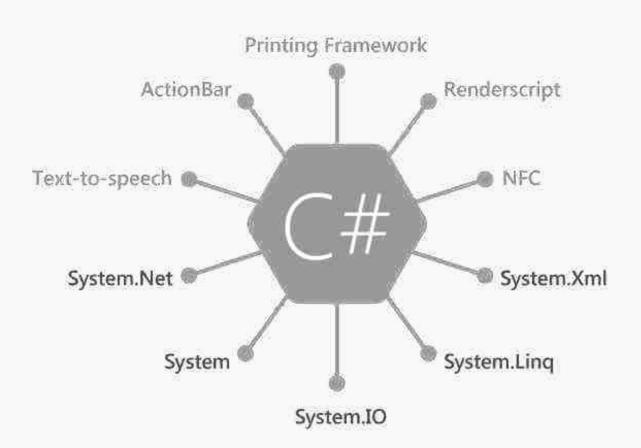

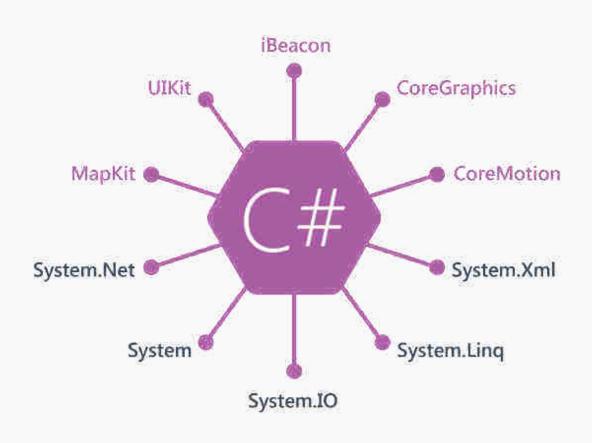

.NET (C#) 前端、后端全栈跨平台

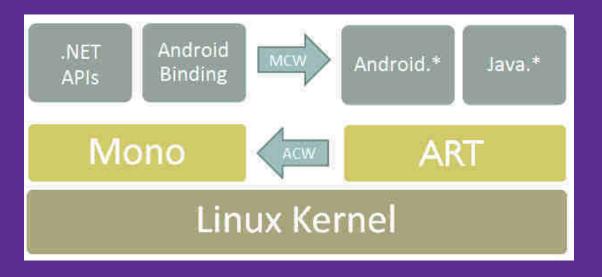

100%原生API

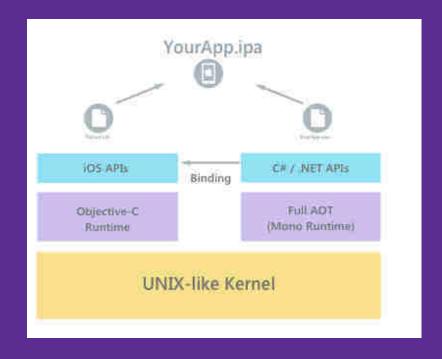

Xamarin底层技术

Mono Binding (绑定) P/Invoke (平台调用)

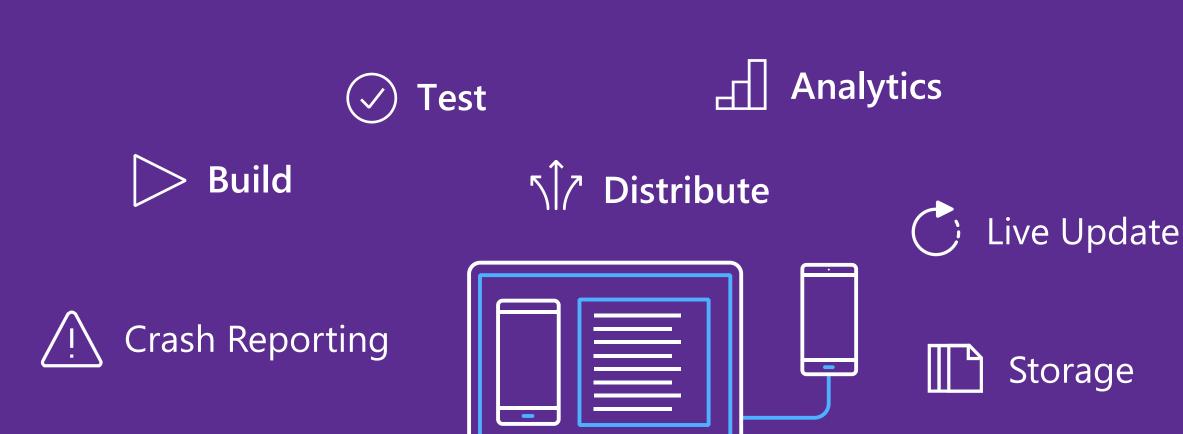

原生编译方式

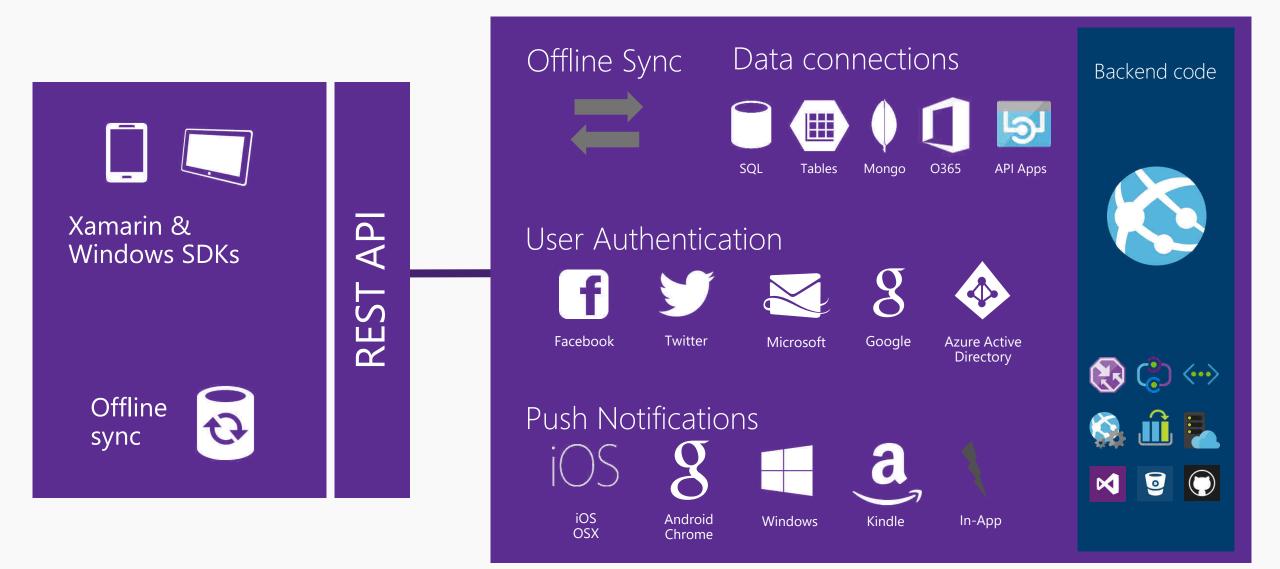

Azure Mobile Center

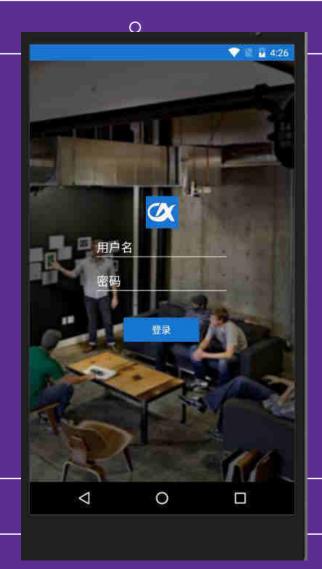

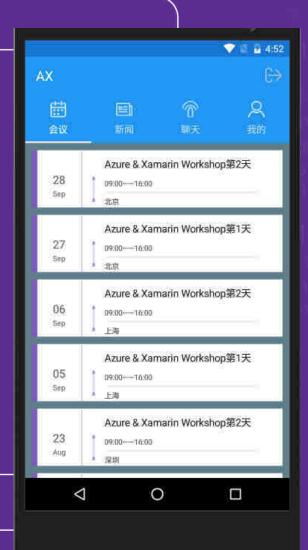

Azure Mobile Apps

Workshop项目 AX App介绍

演练一:创建AXApp项目

01:使用AXMobile项目模板

1. 下载项目模板

https://projectax.blob.core.chinacloudapi.cn/src/AXMobile 01Start.zip https://projectax.blob.core.chinacloudapi.cn/src/AXMobile 02Full.zip https://projectax.blob.core.chinacloudapi.cn/src/Res.zip

2. 恢复Nuget包,编译项目

演练二:创建App登录页

01: AXMobile.Core

- 1. **在**Pages**目录中添加**Login.xaml, **确认此文件属性 中的**Build Action = "EmbeddedResource"
- 2. 在Helpers目录下添加ClearStackHelper.cs
- 3. **在**ViewsModels**目录中添加**LoginViewModel.cs
- 4. 修改MvxApp.cs代码如下:

RegisterAppStart<ViewModels.LoginViewModel>();

02: AXMobile.Droid

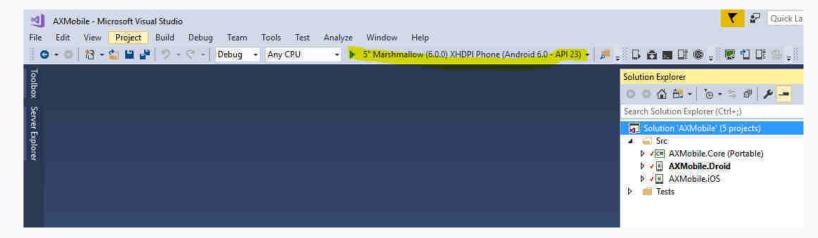

- 1. 在Resources/drwable目录下添加 backgroundimage.png
- 2. **确认文件属性中的**Build Action = "AndroidResource"

03: AXMobile.iOS

- 1. 在Resources**目录下添加**backgroundimage.png
- 2. **确认文件属性中的**BuildAction = "BoundleResource"

04:在VS中启动AXMobile.Droid

- 选择AXMobile.Droid为启动项
- 选择模拟器或真机, 启动

05:在VS for Mac中启动AXMobile.iOS

演练三:创建App首页

01: AX.Core

- 1. 修改Pages目录下的MainPage.xaml
- 2. **修改**ViewModels**目录下的**MainViewModel.cs

02: AX.Droid

1. 在Resources/drawable目录下添加图片: back.png, news.png, communication.png, information.png

2. 确认文件属性中的Build Action = "AndroidResource"

03: AXMobile.iOS

1. 在Resources目录下添加

back@2x.png, news@2x.png, communication @2x.png, information @2x.png

back@3x.png, news@3x.png, communication@3x.png, information@3x.png

2. 确认文件属性中的BuildAction = "BoundleResource"

04: 运行App

演练四:创建App新闻页

01: AX.Core

- 在Pages目录下添加MeetingListPage.xaml, 确认此文 件属性中的Build Action = "EmbeddedResource"
- 在ViewModels目录下添加MeetingListViewModel.cs
- 在Helpers目录下添加HttpClientHelper.cs
- ·添加AppConstants.cs,配置如下常量为AX API根路径

```
public const string Base_API_Url = "";
```

- 在Services目录下添加BaseErrorDto.cs和 CommonErrorDto.cs
- 在Services目录下添加"Meetings"目录,在其中添加 IMeetingService.cs, MeetingService.cs, MeetingListItemDto.cs, MeetingsDto.cs
- 在Model目录下添加MeetingListItem.cs

• 修改MainPage.xaml及MainPageViewModel.cs

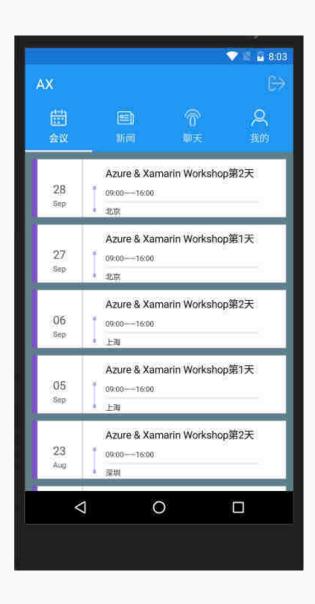

02: AXMobile.Droid

- 在Resources/drawable/中添加blue.png, purple.png
- 确认文件属性中的Build Action = "AndroidResource"

03: AXMobile.iOS

- 在Resources中添加
- blue@2x.png, purple@2x.png,blue@3x.png,purple@3x.png
- 2.确认文件属性中的BuildAction = "BoundleResource"

运行App

演练五:推送

01: 所有项目

• 安装nuget: ksemenenko.AzurePushNotifications

02: AXMobile.Core

• 配置AppConstants.cs的常量

```
public const string Azure_Notification_Hub_Name = "";
public const string Azure_Notification_Hub_ListenConnectionString = "";
```

03: AXMobile.iOS

• 在AppDelegate.cs中添加如下代码

```
public override void ReceivedRemoteNotification(UIApplication application,
NSDictionary userInfo)
            CrossAzurePushNotifications.Platform.ProcessNotification(userInfo);
        public override void RegisteredForRemoteNotifications(UIApplication
application, NSData deviceToken)
CrossAzurePushNotifications.Platform.RegisteredForRemoteNotifications(deviceToken
);
```

感谢
